| Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: | Prerequisites: |
| Študent/študentka mora pred pristopom k izpitu pripraviti in zagovarjati seminarsko nalogu. | The student is obliged to prepare and defend his/her seminar work before the admission to the examination. |

| | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Vsebina: | Content (Syllabus outline): |
| <ul style="list-style-type: none"> • Uvod v virtualni inženiring (definicije, značilnosti) s poudarkom na metodi končnih elementov (MKE) in numerični dinamiki tekočin (CFD). • Arhitektura in komponente sistemov računalniško podprtega inženiringa (CAE). • Osnove metode končnih elementov | <ul style="list-style-type: none"> • Introduction to Virtual Engineering with stress on finite element analysis (FEA) and computational fluid dynamics (CFD). • Architecture and components of computer aided engineering (CAE) systems. • Fundamentals of Finite Element Analysis |

| | |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>in osnove procesa analize konstrukcijskih elementov.</p> <ul style="list-style-type: none"> • Osnove numerične dinamike tekočin in procesa numerične analize. • Osnove sklopljenih analiz. • Integriran razvoj virtualnega prototipa. • Uporaba visokozmogljivega računalništva za računalniško podprt inženiring. | <p>and fundamentals of analyses process of parts of constructions.</p> <ul style="list-style-type: none"> • Fundamentals of Computational Fluid Dynamics with fundamentals of process of numerical simulation. • Fundamentals of Fluid-Structure interaction analysis. • Integrated development of virtual prototype. • High performance computing (HPC) use in computer aided engineering. |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Temeljni literatura in viri / Foundational literature and sources:

- Muhič, Simon. Računalniško podprt inženiring v okolju ANSYS Workbench, 2009.
- Gradiva iz predavanj in vaj pri predmetu Računalniško podprt inženiring, Moodle FIŠ.

Priporočljiva literatura:

- RIEUTORD, Michel. Fluid Dynamics. Cham: Springer International Publishing, 2015. Graduate Texts in Physics. ISBN 978-3-319-09350-5.
- MOUKALLED, F., L. MANGANI in M. DARWISH. The Finite Volume Method in Computational Fluid Dynamics. Cham: Springer International Publishing, 2016. Fluid Mechanics and Its Applications. ISBN 978-3-319-16873-9.
- PATANKAR, Suhas. Numerical Heat Transfer and Fluid Flow. Taylor&Francis, 1980.

Cilji in kompetence:

Študent/-ka spozna in osvoji principe, pristope, metode in tehnike Računalniško podprtrega inženiringa.

Učna enota prispeva predvsem k razvoju naslednjih splošnih in specifičnih kompetenc:

- interdisciplinarno celovito kritično mišljenje, sposobnost analize, sinteze in predvidevanje rešitev,
- razumevanje računalniško podprtih inženirskih analiz in sinteze dela na tehniškem področju,
- sposobnost uporabe pridobljenega znanja v praksi,
- sposobnost obvladovanja sodobnih metod v inženirskih preračunih,
- sposobnost povezovanja različnih strokovnih disciplin,
- sposobnost analize in sinteze v procesu razvoja izdelkov,

Objectives and competences:

Student learns and masters the principles, methods, and approaches of Computer Aided Engineering.

The learning unit mainly contributes to the development of the following general and specific competences:

- comprehensive interdisciplinary critical thinking, ability to analyze, synthesize and anticipate solutions,
- ability to understand computer aided engineering and analyze and synthesize work in technical fields,
- ability to apply the acquired knowledge in practice,
- ability to manage modern methods in engineering calculations,
- ability to link together various professional disciplines,
- ability to analyze and synthesize the product development process,

- | | |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> • uporaba orodij virtualnega modeliranja in inženiringa izdelkov, • izbira in uporaba ustreznih metod analize, modeliranja, simulacije in optimizacije pri računalniško podprttem inženiringu, • sposobnost praktične uporabe CAE programske opreme. | <ul style="list-style-type: none"> • use of tools for virtual modeling and engineering of products, • selection and use of appropriate methods for analysis, modeling, simulation and optimization in CAE, • ability for practical application of a CAE software. |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Predvideni študijski rezultati:

Študentka/Študent:

- pozna in razume aktivnosti pri razvoju izdelkov in računalniško podporo v vseh fazah razvoja izdelka,
- pozna in razume vlogo in zmožnosti CAE (virtualnega inženirstva) v razvoju izdelka, s poudarkom na struktturnih analizah in analizah numerične dinamike tekočin,
- pozna standardna programska orodja in standardne formate za prenos iz orodij za modeliranje v sisteme CAE,
- se usposobi za osnovno analizo, sintezo in vrednotenje rezultatov inženirskih problemov na področju struktturnih analiz in numerične dinamike tekočin.

Intended learning outcomes:

Students:

- knows and understand activities at design phase and computer support in all phases of design
- knows and understand Computer Aided Engineering and CAE capabilities (virtual engineering) in design phase with stress on structural simulations and computational fluid dynamics,
- knows standard software tools and standard formats to exchange the data from 3D modelers to CAE systems,
- develop basic skills to analyse, synthesize and evaluate the results of engineering problems in the field of structural analyses and computational fluid dynamics.

Metode poučevanja in učenja:

- | | |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ul style="list-style-type: none"> • predavanja z aktivno udeležbo študentov (razlaga, diskusija, vprašanja, primeri, reševanje problemov) • laboratorijske vaje (uporaba računskih orodij) • individualne in skupinske konzultacije (diskusija, dodatna razlaga, obravnavanje specifičnih vprašanj) | <ul style="list-style-type: none"> • lectures with active students' involvement (explanation, discussion, questions, examples, problem solving) • laboratory work (usage of numerical tools) • individual and group consultations (discussions, supplementary explanations, treatment of specific questions) |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

Learning and teaching methods:

Delež (v %) /

Weight (in %)

Načini ocenjevanja:

Način (pisni izpit, ustno izpraševanje, naloge, projekt):

- pisni izpit
- seminarska naloga in predstavitev naloge

Assessment:

Type (examination, oral, coursework, project):

- written examination
- seminar paper and its presentation
