

UČNI NAČRT PREDMETA / COURSE SYLLABUS

Predmet:	Internet stvari in kiberfizični sistemi
Course title:	Internet of Things and Cyber-Physical Systems

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Računalništvo in spletne tehnologije, visokošolski strokovni študijski program prve stopnje	-	Drugi ali tretji	Četrta ali šesta
Computer Science and Web Technologies, first cycle Professional Study Programme	-	Second or third	Fourth or sixth

Vrsta predmeta / Course type Izbirni / Elective

Univerzitetna koda predmeta / University course code: 2-RST-VS-IP-ISKS-2020-05-14

Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	-	45	-	-	105	6

Nosilec predmeta / Lecturer: prof. dr. Andrej Škraba, izr. prof. dr. Davorin Kofjač

Jeziki / Languages:	Predavanja / Lectures:	Slovenski / Slovenian
	Vaje / Tutorial:	Slovenski / Slovenian

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Pogoj za vključitev v delo je vpis v 2. letnik oz. 3. letnik študija.

Prerequisites:

The condition for attendance is enrolment in the 2nd year or in the 3rd year of studies.

Vsebina:

- Definicija interneta stvari in kiberfizičnih sistemov
- Node.js na operacijskem sistemu Linux in ARM strojni opremi
- Spletno integrirano razvojno okolje cloud9
- Arduino mikrokontroler in Firmata
- IoT Modul ESP32
- Programski jezik JavaScript / ECMA Script

Content (Syllabus outline):

- Definition of Internet of Things and Cyber-physical Systems (CPS and IoT)
- Node.js on Linux operational system and ARM hardware
- Web Integrated Development Environment cloud9
- Arduino microcontroller and Firmata
- IoT Modul ESP32
- JavaScript / ECMA Script programming language

- Interakcija s strojno opremo preko mehanizma zahtevkov/odgovor
- Interakcija s strojno opremo preko spletnega vtičnika
- MQTT protokol
- Iskanje v omrežjih
- Razvoj grafičnega uporabniškega vmesnika
- Branje in pisanje na digitalnih vhodno/izhodnih priključkih
- Objektno orientirani razvoj interaktivnih grafov za prikazovanje podatkov v realnem času
- Branje in pisanje na analognih vhodno/izhodnih priključkih
- Serijski, I2C, SPI protokoli
- Senzorji in aktuatorji
- Upravljanje enosmernega motorja s H-krmiljem
- Opis kontrole pozicije enosmernega motorja
- Razvoj kontrolnih sistemov v okolju interneta stvari
- Uporaba oblračnih tehnologij
- Uporaba družbenih omrežij za upravljanje interneta stvari in kiberfizičnih sistemov
- Opis primerov uporabe na področju informacijskih sistemov v organizacijah

- Interaction with hardware via request/response mechanism
- Interaction with hardware with web socket
- MQTT protocol
- Network search
- Development of Graphical User Interface
- Reading and writing on digital I/O pins
- Object oriented development of interactive charts for data visualization in real time
- Reading and writing of analog I/O pins
- Serial, I2C and SPI protocols
- Sensors and actuators
- Control of DC motor with H-bridge
- Description of DC motor position control problem
- Development of control systems in the Internet of Things landscape
- Application of cloud technologies
- Application of social media for control of Internet of Things and Cyber-physical Systems
- Description of the applications in the framework of organizational information systems

Cilji in kompetence:

Učna enota prispeva k razvoju naslednjih splošnih in predmetno-specifičnih kompetenc:

Splošne kompetence:

- Prepoznavanje in ocenitev aktualnih in nastajajočih tehnologij

Objectives and competences:

The instructional unit contributes to the development of the following general and subject-specific competences:

General competences:

- Identification and evaluation of actual and pending technologies and evaluation of their usefulness for the meeting of user needs.

ter ocenitev njihove uporabnosti za reševanje potreb uporabnikov.

- Sposobnost fleksibilne uporabe znanja v praksi.

Predmetno-specifične kompetence:

- Pridobljeno znanje s hitro razvijajočega področja interneta stvari in kiberfizičnih sistemov, ki bo omogočilo takojšnjo uvedbo rešitev v obstoječe informacijske sisteme izbranih organizacij.
- Spoznanje osnovnih pojmov in gradnikov, ki niso neposredno s področja klasičnih organizacijskih informacijskih sistemov vendar pa so le-ti ključni za razumevanje interneta stvari in kiberfizičnih sistemov.
- Pridobljeno praktično in teoretično znanje, ki bo slušateljem omogočilo zasnovo novih informacijskih sistemov v okolju industrije 4.0

- The ability to flexibly use knowledge in practice.

Subject-specific competences:

- Acquired knowledge in the fast evolving field of Internet of Things and Cyber-physical systems, which will enable the student to instantly implement solutions into the existent organizational information systems.
- Acquired knowledge about basic technological building blocks that are necessary for understanding of Internet of Things and Cyber-physical systems
- Acquired practical and theoretical knowledge that will enable students to design and create new information systems in the Industry 4.0 landscape.

Predvideni študijski rezultati:

Znanje in razumevanje:

Študent/študentka:

- razume osnovne principe delovanja in zasnove interneta stvari in kiberfizičnih sistemov
- pozna ključne tehnologije potrebne za uspešno realizacijo projektov interneta stvari in kiberfizičnih sistemov
- razume teoretični opis kontrolnega sistema upravljanja interneta stvari in kiberfizičnih sistemov
- pridobi znanja o programiranju za upravljanje z aktuatorji in delo s senzorji
- pridobi znanje za uspešno uvedbo interneta stvari in kiberfizičnih sistemov v organizacijski informacijski sistem

Intended learning outcomes:

Knowledge and understanding:

The student:

- understands the basic operational and design principles of Internet of Things and Cyber-physical Systems
- understands the key technologies that are needed for successful realization of Internet of Things and Cyber-physical Systems projects
- understands a theoretical description of control system and control of Internet of Things and Cyber-physical Systems
- acquires the knowledge about programming for application of actuators and sensors
- acquires the knowledge for successful introduction of Internet of Things and Cyber-physical Systems into organizational systems
- acquires the knowledge about the project realization in the real-world environment.

<ul style="list-style-type: none"> • pridobi znanje o uvedbi projektov v realnem okolju na različnih področjih aplikacije <p>Prenesljive/ključne spretnosti in drugi atributi:</p> <ul style="list-style-type: none"> • pridobljeno znanje bo slušateljem omogočilo takojšnjo uvedbo interneta stvari in kiberfizičnih sistemov v informacijski sistem izbrane organizacije 	<p>Transferable/Key Skills and other attributes:</p> <ul style="list-style-type: none"> • acquired knowledge will enable the students to implement Internet of Things and Cyber-physical Systems solutions into the existing organizational information system
---	---

Metode poučevanja in učenja:

<ul style="list-style-type: none"> • predavanja v opremljeni računalniški predavalnici • vaje

Learning and teaching methods:

<ul style="list-style-type: none"> • lectures in computer lecture room • tutorials
